

Example

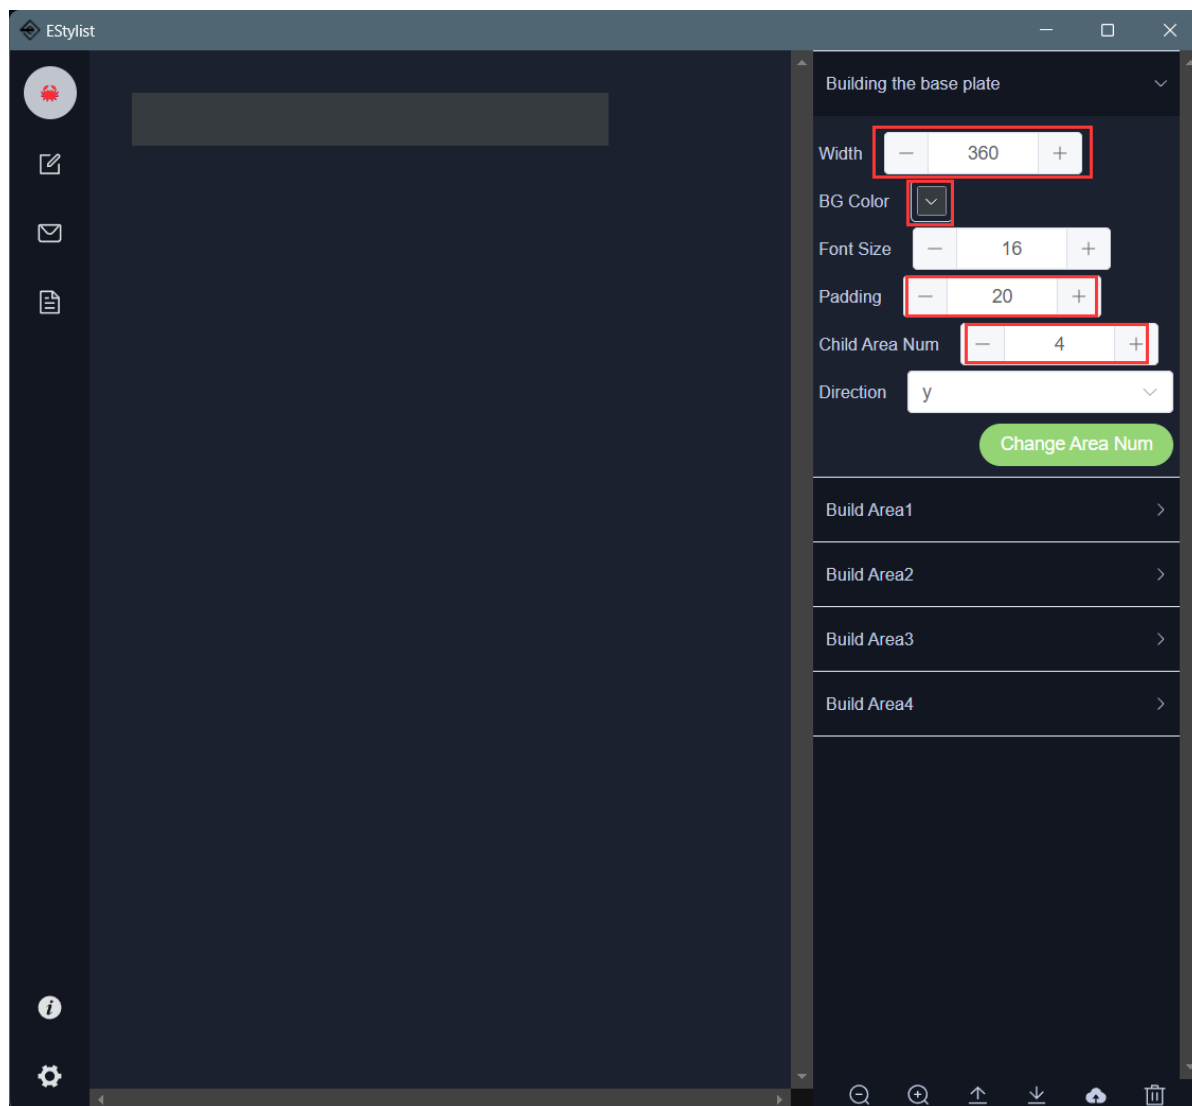

接下来，我们将学习一个例子来验证学习成果！

Next, we will learn an example to verify the learning outcomes!

Build the base plate

第一步，修改底板中的宽度、背景色、内边距以及子区域个数

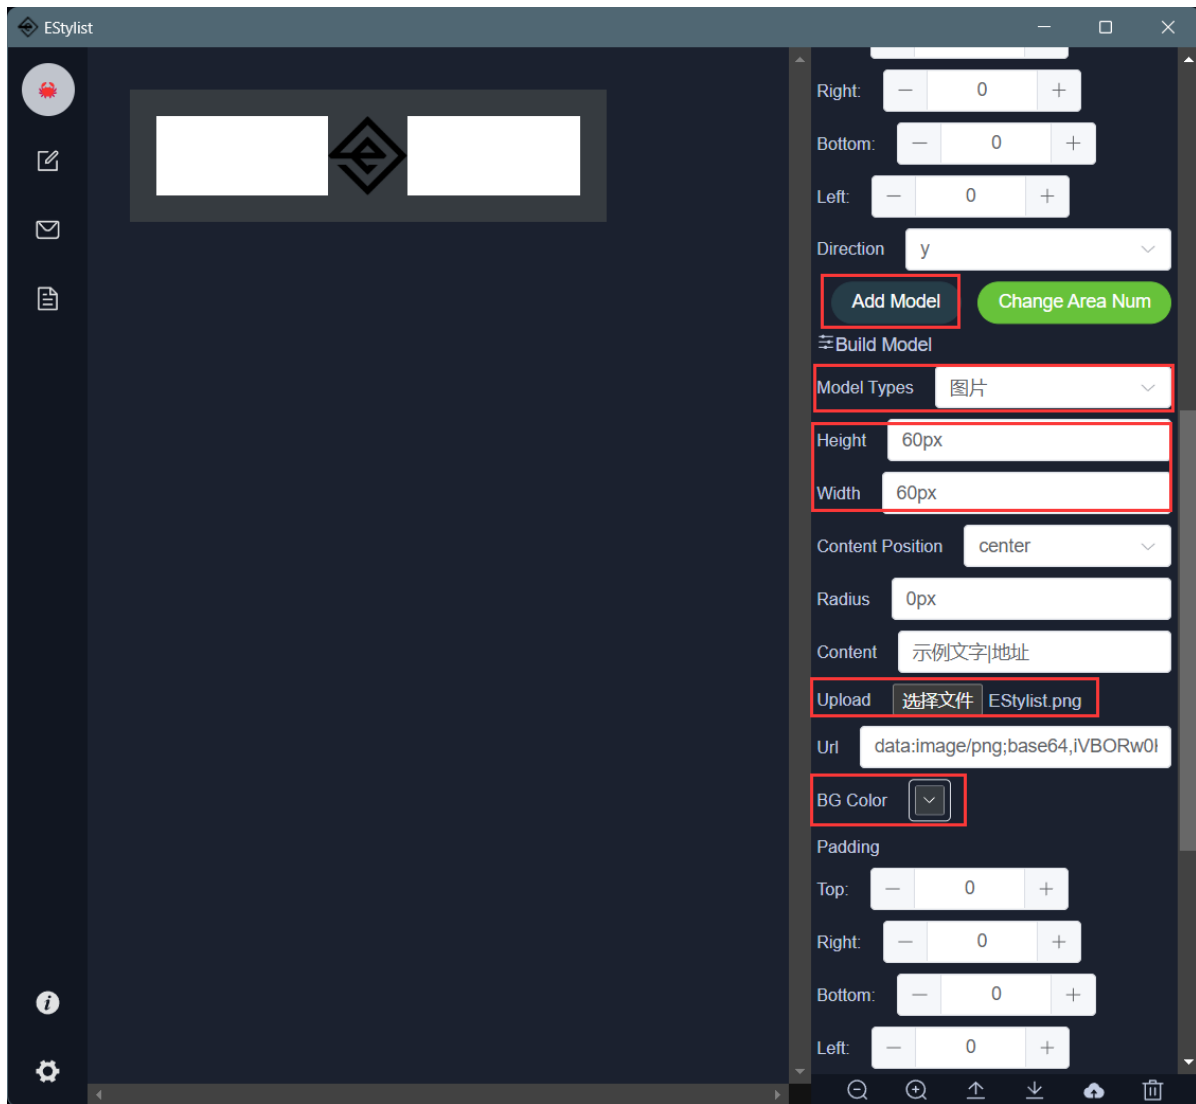

The first step is to modify the width, background color, padding, and number of sub areas in the base plate

Add Logo

接下来在区域中添加模块，设置模块类型为图片，修改高度、宽度、并选择一个你的Logo图片，并修改背景色

Next, add a module to the area, set the module type to Image, modify the height and width, choose a logo image, and modify the background color

但是我们发现白色的区域，这时候我们就需要到当前的区域中修改区域的背景色即可

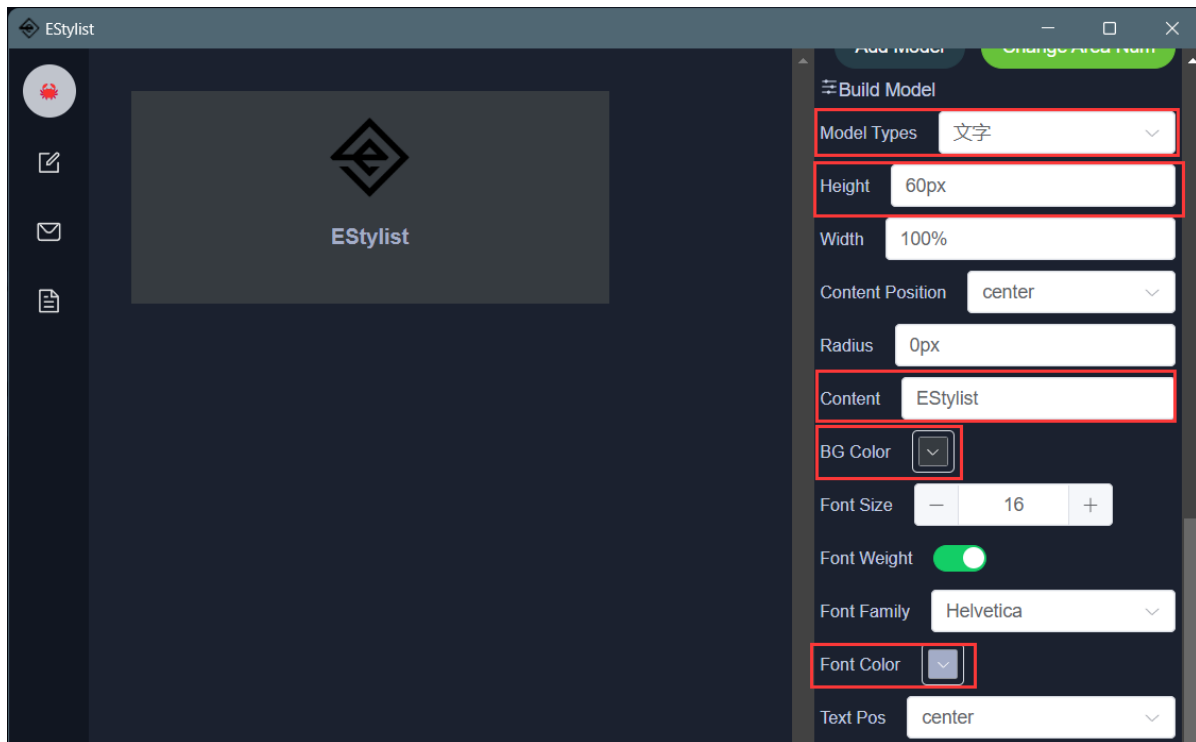

But we found a white area, so we need to modify the background color of the area in the current area

Add Text

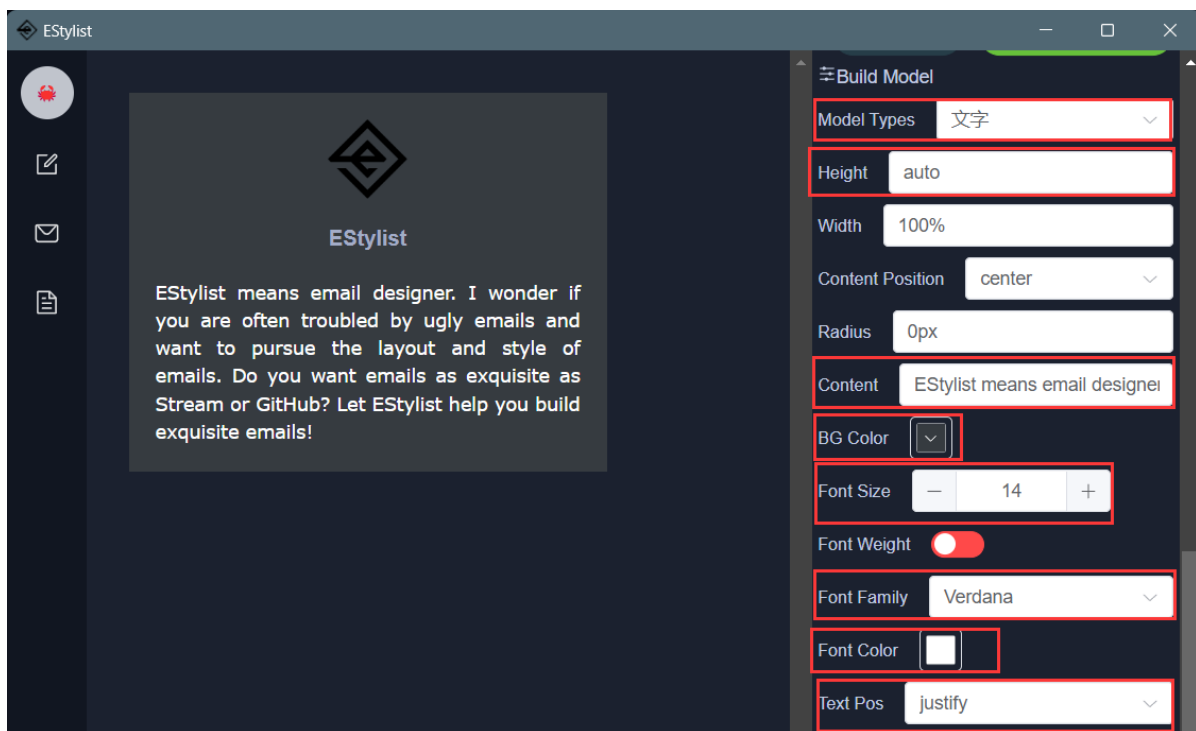

接下来到第二个区域中添加模块，选择模块类型为文字，修改文字内容、模块的高度、背景色、文字颜色

Next, add a module to the second area, select the module type as text, modify the text content, module height, background color, and text color

下面为了对齐文字，我们需要将文字位置改为justify

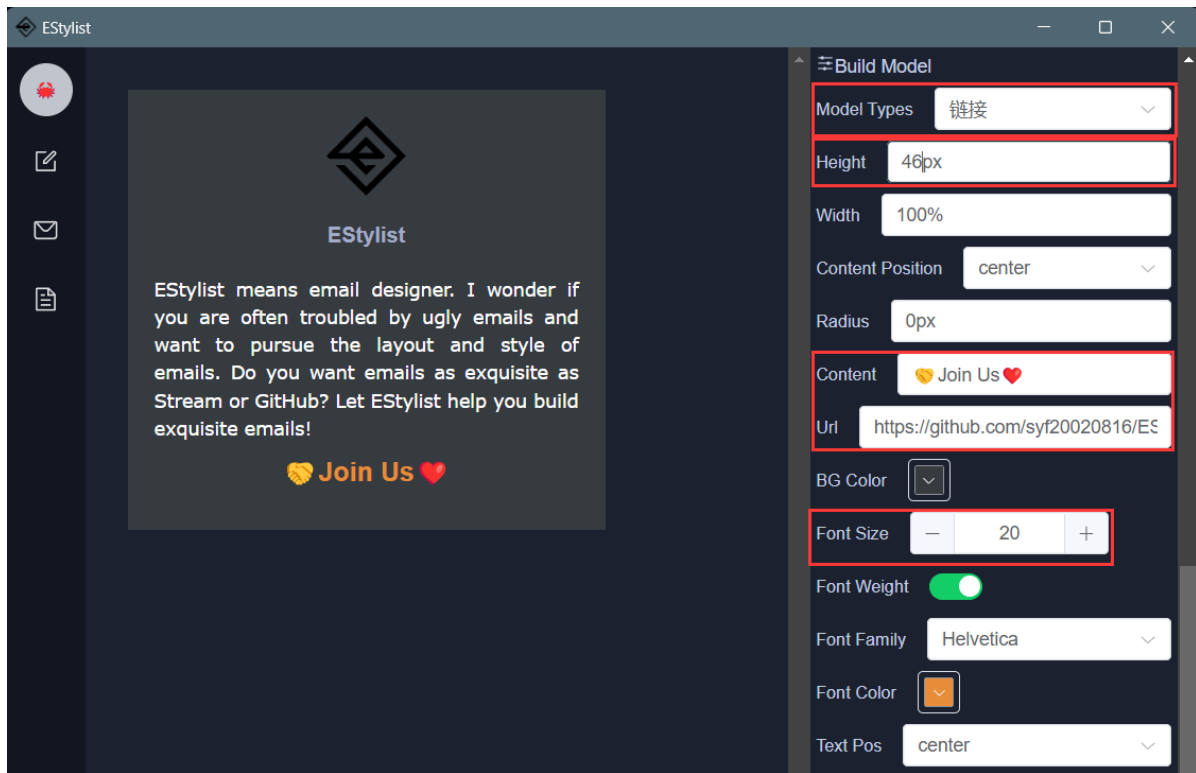

To align the text below, we need to change the text position to justify

Add Link

选择使用链接，设置链接文字，然后设置链接地址，当然emoji表情🤖你也可以使用

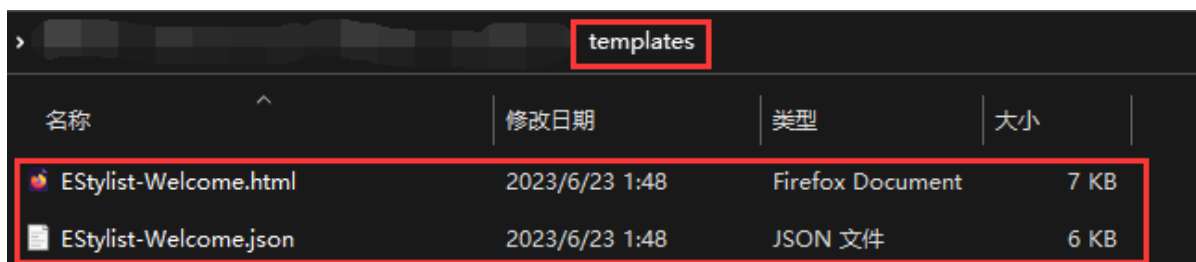

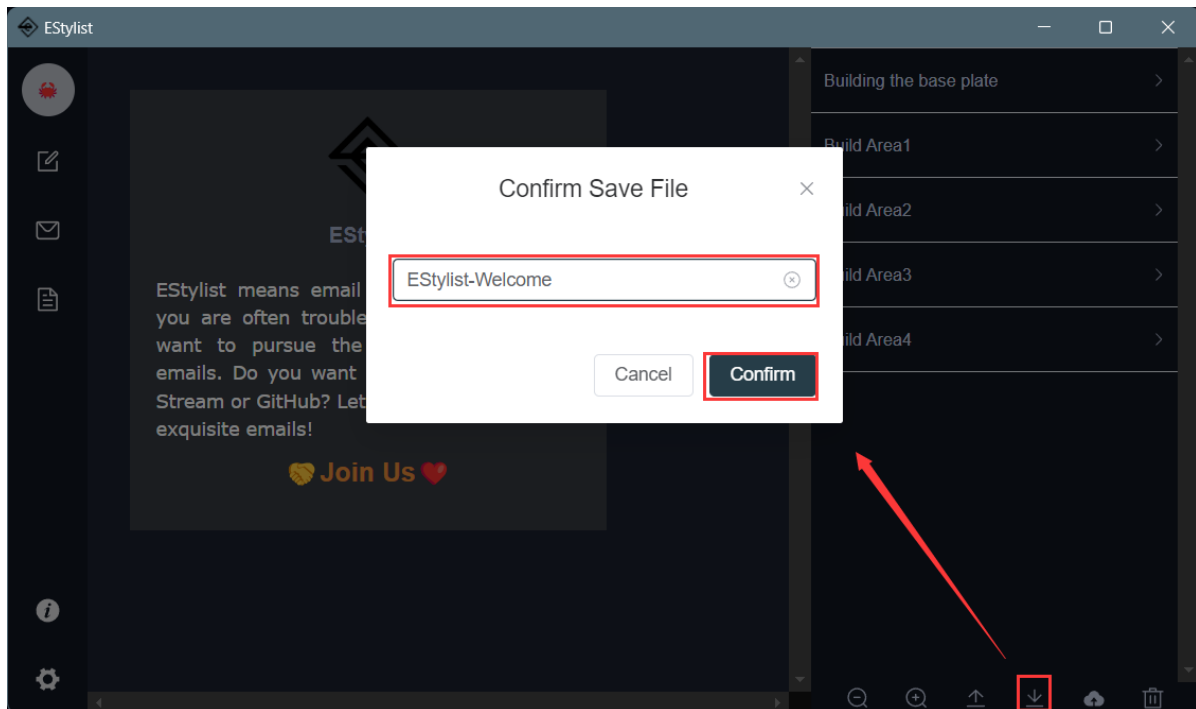

Choose to use links, set the link text, and then set the link address, of course emoji emoji emoji 🤖
You can also use

Download Template

完成模板后我们就可以将模板下载到本地进行保存以便于后续的编辑或发送模板

After completing the template, we can download it locally and save it for future editing or sending

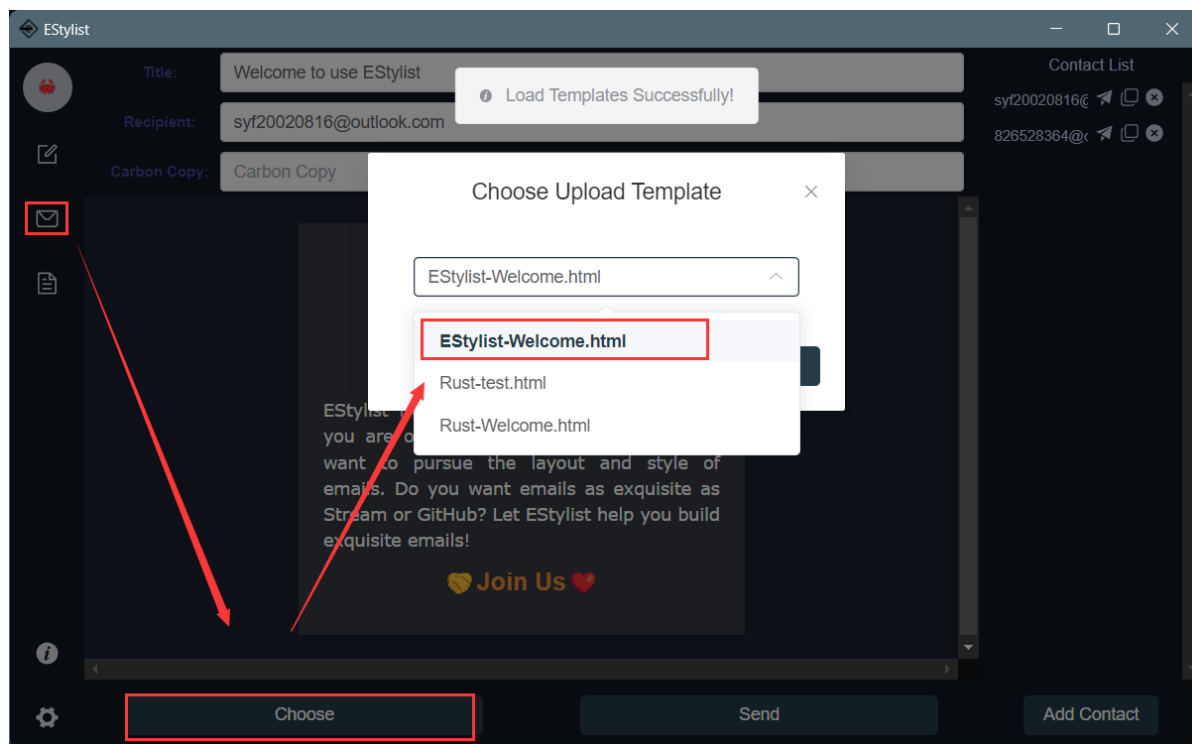

我们点击保存按钮，并设置名称，完成后我们在templates目录下就可以看到两个文件，分别是json和html格式的，html格式支持您直接进行预览

We click the save button and set the name. After completion, we can see two files in the templates directory, which are JSON and HTML formats. The HTML format allows you to preview directly

Send Email

最后我们到发送页面，点击选择按钮，选择我们需要的模板，设置好邮件名称和收件人您就可以发送了

Finally, we will go to the send page, click the select button, select the template we need, set the email name and recipient, and you can send it
